

Software Engineer

5.3 Years Experience

ABOUT ME

Software Engineer with 5+ years of experience designing and developing scalable solutions across domains including marketplace platforms, trade compliance, real estate, and university management systems. Skilled in Frontend development, GenAI integrations, and full-stack application design using technologies such as React.js, Next.js, NestJS, Node.js, JavaScript, and Java (Spring Boot). Passionate about building visually engaging web experiences, AI-driven rapid solutions, and intelligent systems using modern frameworks and architectures.

CURRENT COMPANY

2020- Present

Valueadd Softtech

Responsibilities

- Design and develop scalable applications by understanding the business requirements
- Coordinate internally with team members regarding task or Github pull request reviewing if required.
- Documentation like API document, Release notes, MindMap (if required)
- Troubleshoot, debug, and enhance existing applications to improve performance and user experience.

SKILLS

- | | | | |
|-------------------------|---------------------|------------------------|---------------|
| • Javascript/Typescript | • React Js/ Next Js | • Node js | • Nest js |
| • Java / (Spring boot) | • PostgreSQL | • MongoDB | • AI Workflow |
| • Docker basics | • Vibe coding | • Ollama/ hugging face | |

TOOLS

- | | | | |
|---------------|----------------------|-------------|---------------------|
| • Claude code | • Cursor AI/ Augment | • Vercel v0 | • Vercel deployment |
| • Postman | • Jira | • git | • n8n |

PROJECTS WORKED ON

1. Xirify

Duration of Project: 13 Months

Technology Used: React JS, Node Js, Mongo Db

Tools used: MongoDB, VsCode, Postman, Jira, Git

Team Size: 8-10

Project Description:

Xirify is an on-demand service and delivery management platform designed to connect customers with local service partners, enabling seamless order placement, efficient partner onboarding, and real-time delivery tracking. It incorporates features such as real-time updates, secure payment gateway integration, and dynamic data handling to ensure smooth and reliable service execution across the application.

Role in the Project:

Worked as a Full Stack Developer, contributing to both backend and frontend development using Node.js and MongoDB. Developed and optimized backend APIs, implemented in-app push notification systems, and integrated secure payment gateways. Handled database design and complex data manipulations to ensure performance and scalability. On the frontend, implemented UI components, data filtration, and API integrations to enhance user experience. Additionally, troubleshooted and debugged existing functionalities, performed unit testing, and maintained technical documentation to support ongoing development and scalability.

2. TCAS

Duration of Project: 26 Months

Technology Used: React, Next, Java, Spring boot, Mysql

Tools used: Figma

Team Size: 10-12

Project Description:

Trade Compliance As a Service (TCAS), as the name suggests, is a portal to provide trade compliance services like entity screening, commodity classification, license screening, rules publications, etc. Users can purchase these services on a pay-as-you-go basis, organize services under workspaces and share workspaces/services to other users with multi-region support.

Role in the Project:

Contributed as a Full Stack Developer, translating business requirements into scalable and efficient solutions. Developed and maintained clean, optimized code while implementing frontend designs, data filtration mechanisms, and seamless API integrations. Actively involved in debugging, upgrading existing features, and ensuring application stability through unit testing. Collaborated closely with solution architects and cross-functional teams to deliver features within sprint timelines, and participated in client discussions to align technical solutions with business needs. Also maintained comprehensive technical documentation to support development and future enhancements.

3. Agent Onboarding

Duration of Project: 15 Months

Technology Used: Vue JS, Javascript, Aspeinify(Low code platform)

Tools used: MongoDB, VsCode, Postman, Jira, Git

Team Size: 6-8

Project Description:

The project involves developing a software solution for Procasa, a company managing multiple real estate agents and market centers. The main goal is to create a centralized agent onboarding system that caters to various roles within the organizations hierarchy.

Role in the Project:

Led a team of 5 developers as a Team Lead, driving end-to-end development and delivery of the application. Collaborated with stakeholders to gather and refine requirements, and translated them into scalable technical solutions. Oversaw implementation of frontend designs, data filtration, API integrations, and unit testing while ensuring clean and efficient code practices. Actively coordinated with solution architects, managed sprint timelines, and participated in client meetings to align deliverables with expectations. Mentored team members, resolved technical challenges, and ensured smooth collaboration, while also handling debugging, application enhancements, and maintaining technical documentation.

4. University Management

Duration of Project: 9 Months

Technology Used: Angular, Node, SQL Server

Tools used: Visual Studio Code, SSMS, Jira, Git

Team Size: 5-6

Project Description:

University Management System that streamlines academic and administrative workflows, managing student, faculty, and course information while automating enrollment, scheduling, and reporting.

Role in the Project:

Managed student and admin portals, implementing features such as course admissions and related academic workflows. Designed and modified database schemas and created or updated stored procedures as needed. Developed and maintained RESTful APIs to connect front-end and back-end functionalities. Contributed to project documentation, ensuring clarity for future maintenance and enhancements. Worked closely with the team to deliver project features efficiently while ensuring high-quality standards. Performed testing, debugging, and code optimization to ensure smooth and reliable application performance.
